Sharing Good Practices and Lesson Learned

AW Prichard
Staff Engineer
PNNL-SA-144378
The goal: To help colleagues at various facilities operate safely

Monthly phone call: EFCOG Criticality Safety Task Group, open to all criticality safety professionals
  - Focused on status of standards, discussion of topics in criticality safety, and lessons learned

Topics solicited for monthly call
Lessons Learned - Process

- Lessons Learned from other sites – Occurrence Reporting and Processing System (ORPS - DOE), DNFSB reports, or events that sites are willing to share.
- Could similar conditions occur at other sites?
- Focus: how other sites can/have identified, prevented, or mitigated similar conditions
  - Alternate approaches to prevent or mitigate similar conditions
- Undocumented discussions: Often more candid
Lessons Learned – Recent Discussions

How many of these topics are relevant to your sites?

- As facilities are being shutdown, maintaining adequate criticality safety posture can be difficult as a result of reduced or changing operations and reallocating resources
- Unwanted material accumulations have happened at multiple facilities. The location, operation, or cause can lead to discussions of similar conditions at different sites
- The use of visual criticality controls and how they can be implemented
- What should be considered when introducing new equipment in the plant
- What went well and how that might be duplicated at other sites
- How to achieve knowledge retention of both operators and criticality staff and how to recognize changes
Lessons Learned – Conclusions

- Your participation is important to sharing ideas on how events at other sites could be addressed.
- Solutions are not one size fits all. Additional ideas are helpful.
- With a little luck, everyone learns something!
