Nuclear Criticality Safety Division

NCSD Engineering Calculation Competition

The Membership and Marketing Department of the American Nuclear Society found in a recent study that Nuclear Criticality Safety Engineers are one of the highest paid types of engineer! But often, even other nuclear engineers don't know what we do. We'd like to change that! The Nuclear Criticality Safety Division (NCSD) has developed a representative set of basic problems that relate to our field, and we are challenging the young and student members or anyone not already a member of NCSD to try and solve them!

What: An engineering problem-solving competition

When: At the ANS 2017 Winter Meeting in November

Who: All student and YMG attendees, plus all non-NCSD member attendees

Why: Great fun, great prizes, and hopefully you'll learn about criticality safety engineering too!

More announcements to follow! Check <http://ncsd.ans.org> for more details or email Mackenzie Gorham (gorham.mackenzie@gmail.com) with questions!
